

## A COMMON PROBLEM

### 3 BILLION PEOPLE STILL COOK WITH BIOMASS.

4 million people die each year from illnesses related to cooking-smoke. Women and children bear this burden disproportionately but the entire community suffers. Families are burdened with heavy opportunity, health and environmental costs. Deforestation, desertification and climate change, all accelerated by biomass depletion from cooking, affect the entire world.

## A UNIQUE SOLUTION

The simple alcohols, ethanol and methanol, are clean and sustainable fuels that revitalize local economies by creating jobs and energy independence. Clean cookstoves can burn these fuels safely and efficiently. **NO SOLID FUELS, NO SMOKE.**

**REDUCED EMISSIONS. HEALTHY, HAPPY FAMILIES.**
